# Extinção ameaça um milhão de espécies, diz estudo

Mais abrangente avaliação científica do ecossistema mundial afirma que nunca na história da Humanidade a natureza esteve em tamanho perigo. Declínio de espécies é sem precedentes.

### Greta Thunberg

From Wikipedia, the free encyclopedia

**Greta Thunberg**<sup>[a]</sup> (born 3 January 2003) is a Swedish schoolgirl who, at age 15, began protesting outside the Swedish parliament about the need for immediate action to combat climate change and has since become an outspoken climate activist.<sup>[1][2][3][4]</sup>

She is known for having initiated the school strike for climate movement that formed in November 2018 and surged globally after the United Nations Climate Change Conference (COP24) in December the same year. Her personal activism began in August 2018, when her recurring and solitary *Skolstrejk för klimatet* ("School strike for the climate") protesting outside the Swedish parliament in Stockholm began attracting media coverage,<sup>[5]</sup> even though Sweden has already enacted "the most ambitious climate law in the world" – to be carbon neutral by 2045.<sup>[6]</sup>

On 15 March 2019,<sup>[7]</sup> an estimated 1.4 million students in 112 countries around the world joined her call in striking and protesting.<sup>[3]</sup> A similar event involving students from 125 countries took place on 24 May 2019.<sup>[8]</sup>

Thunberg has received various prizes and awards for her activism. In March 2019, three members of the Norwegian parliament nominated Thunberg for the Nobel Peace Prize.<sup>[9]</sup> In May 2019, at the age of 16, she featured on the cover of *Time* magazine.<sup>[10]</sup> Some media have described her impact on the world stage as the Greta Thunberg effect.<sup>[11]</sup>[12][13]

## School strike for climate

From Wikipedia, the free encyclopedia

The school strike for climate (also known variously as Fridays for Future, Youth for Climate and Youth Strike 4 Climate) is an international movement of school students who are deciding not to attend classes and instead take part in demonstrations to demand action to prevent further global warming and climate change. Publicity and widespread organising began when the climate activist Greta Thunberg staged an action in August 2018 outside the Swedish Riksdag (parliament), holding a sign that read "Skolstrejk för klimatet" ("School strike for the climate").<sup>[2][3]</sup>

### Jardim Botânico da Unicamp: canteiros temáticos para popularizar o conhecimento sobre plantas

O Jardim Botânico da Unicamp será constituído de diversos módulos. Aqui são apresentados alguns deles. O objetivo do projeto é divulgar o conhecimento sobre as plantas e sua importância para nós, deixar também clara a importância da conservação do meio ambiente, fornecer plantas para pesquisas, mostrar a sua beleza e disponibilizar ainda uma área de lazer para a população de Campinas e região.
